

Modular Air Distribution Systems

-Production, Maintenance, Repair and Overhaul

-Compressed Air Solutions for the Aviation Industry & Industrial Markets

Protect surfaces with our
Soft-Line Couplings

High Performance Air & Fluid Guns

Hose Reels & Hose Kits

Vented Safety Couplings

Multi-Link Couplings

Synchronized Pneumatic Components - Designed to work together to ensure maximum performance

eSafe Couplings, Industry-standard Nipples

CEJN'S COUPLING SERIES eSafe is the new generation coupling. eSafe is an innovative and patented safety coupling offering the highest flow combined with a low pressure drop. eSafe also has a low connecting force, compact and easy to grip design. Its extreme durability and high flow and low pressure drop offer maximum operation productivity and a reliable product for years to come. We meet a variety of industry standards with our multi-series offerings of nipples as well.

Multi-Link

The CEJN Multi-Link lets you connect as many outlets as you need at each distribution point to form an efficient air distribution system. The outlets can be positioned at different angles and still assure an unobstructed and high air flow. The units can be supplied with compressed air from either end and come in 2,3,4 or 5 outlet versions. Eliminates the need for elbows, tees, unions and nipples that can result in jumbled piping configurations.

Hose Reels - Closed

CEJN's Closed Safety Reel is a durable reel that provides excellent performance with its full-flow patented design that does not restrict flow, providing maximum power to the tools. The safety reel offers a slow retraction function, hose guiding, PUR hose, soft stop-ball to prevent tripping and anti-kink safety features, plus a 180 degree swivel. Now available with a hi-vis hose option.

Hose Reels - Open

CEJN's open hose reels are designed for safe performance in the workplace. The heavy-duty spun discs with rolled edges make the reel safe to handle and minimize damage to the hose due to sharp edges. The open hose reels have longer length and larger hose dimensions, thanks to a robust frame and compact high flow swivel. Also available with a hi-vis hose option.

Hose and Hose Kits

The CEJN hose family offers several styles of polyurethane (PUR) hose, including straight braided, straight non-braided and spiral non-braided for specific application requirements. The CEJN hose kit provides an easy, convenient way to combine just the right hose and coupling for leak-free hose connections. Each kit contains a CEJN PUR hose, Stream-line couplings, nipples and swivels and a complete and ready-to-use assembly.

eSafe
The New Generation
High performing couplings with safety function in compliance with safety standards (OSHA 1910.95)

The New Standard on all CEJN North America Couplings.

Air & Fluid Guns and Accessories

The Multiflow Air & Fluid Gun is the professionals' must-have tool. It effectively cleans surfaces with air or water-base fluids with unparalleled blowing force. Precise flow is achieved by adjustable flow settings. Nozzle adjusts from narrow jet to wide beam. The Multiflow meets and exceeds OSHA safety standards when dead-ended.

Soft-Line Couplings Offer Protection

Damage to product is costly. CEJN offers Soft-Line couplings that soften the edges of couplings, making them less likely to damage the finishes on aircraft components. The soft covering also protects and prolongs the life of the coupling.

FRL Products

The CEJN Filtration, Regulation, and Lubrication (FRL) range offers products that provide a maximum flow of clean air and a consistent operating pressure, resulting in better system performance and lower maintenance costs. FRL products are offered in 1/8" through 1" thread connection sizes. We also offer complete, pre-assembled sets including filter, regulator, lubricator and gauge.
